PRIYANSHU NEGI

Python Full Stack Developer | Django, React.js & Generative AI

+91 7428432234 | negips11april@gmail.com | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Python full stack developer who has built and deployed three live client applications with Django, Django REST Framework and React.js, two of them powered by generative AI. Owns features from database design and REST APIs through frontend integration and deployment. Experienced in integrating LLM APIs (Groq) and retrieval-augmented generation (ChromaDB) into Django applications, with generative AI training at QSpiders and coursework in LangChain and Hugging Face, plus query optimization and caching on MySQL.

TECHNICAL SKILLS

- **Backend:** Python (OOP, scripting, exception handling), Django, Django REST Framework, REST API design, token-based authentication, Django ORM (select_related, prefetch_related), response caching, Django Admin, Django unit testing
- **Databases:** PostgreSQL, MySQL, SQLite; relational modeling, schema design, complex queries, query optimization; ChromaDB (vector database)
- **Generative AI & LLM:** LLM API integration (Groq), LangChain and Hugging Face (coursework), Retrieval-Augmented Generation (RAG), semantic search, AI-assisted resume screening, Pydantic (structured output validation), PyMuPDF, python-docx
- **Frontend:** React.js, JavaScript, HTML5, CSS3, Streamlit
- **Tools & Deployment:** Git, GitHub, Postman, VS Code, Render, Vercel, Neon

PROJECTS

BioLogist: E-Commerce Platform | Django, Django REST Framework, MySQL, React.js
Live | Backend GitHub | Frontend GitHub

- Built and deployed a live e-commerce platform for a client, with a product catalog, variants, shopping cart and bulk product import.
- Designed relational models for products, categories, subcategories and product variants.
- Cut query count per page by 40-50% by optimizing product queries with select_related() and prefetch_related().
- Cut average product-list response time by about 50% with 10-minute response caching on the endpoint.
- Implemented variant availability checks at the database level using Exists() and OuterRef().
- Built Excel-based bulk import supporting 500+ products per upload, replacing hours of manual entry.
- Fixed duplicate cart entries by updating the quantity of an existing CartItem instead of creating a new record.
- Extended the catalog-number field to 255 characters to resolve a length limitation.
- Structured frontend-backend data handling with React state/effects and a dedicated API service layer.

TalentLens: AI Resume Screening System | Django, Django REST Framework, React.js, Groq API
Live | GitHub

- Built and deployed an AI-powered tool for a client that screens multiple resumes against a job description and scores candidates.
- Built Django REST Framework APIs that accept multiple PDF and DOCX resumes and screen them against a job description.
- Parsed resume text with PyMuPDF and python-docx, then extracted skills and computed matched and missing skills per candidate.
- Integrated the Groq LLM API to generate candidate assessments (strengths, additional skills, match score), validating structured responses with Pydantic models.
- Stored screening history so past results can be reopened, with SQLite for local development and PostgreSQL configured for deployment.
- Implemented CSV and PDF export of screening reports, plus side-by-side candidate comparison.
- Built the React/Vite frontend to upload resumes, display match scores and strengths, and browse screening history.

AI Support Operations Copilot | Django REST Framework, Groq API, ChromaDB, Streamlit
Dashboard | API | GitHub

- Built and deployed an AI-powered support operations platform for a client that helps support teams manage tickets, analyze customer issues and draft replies.
- Built Django REST Framework APIs for ticket management with token-based authentication (register, login, logout) and user-scoped querysets, so each user can only access their own tickets and analyses.

- Designed ticket endpoints for create, list and PATCH updates of status and priority, plus custom analyze and generate-reply actions and an analysis-history API.
- Integrated the Groq LLM API to summarize issues, classify category and priority, recommend agent actions and draft customer replies, validating structured outputs with Pydantic.
- Implemented retrieval-augmented generation with ChromaDB, running semantic search over support knowledge articles managed through Django Admin to supply context to AI workflows.
- Built a Streamlit dashboard that calls the API over token-authenticated HTTP to create tickets, track metrics and recent activity, and review AI analyses.
- Wrote 9 Django tests; deployed the API and dashboard as separate Render services with PostgreSQL (Neon) in production and SQLite for local development.

EXPERIENCE

Python Full Stack Intern | QSpiders, Gurugram | Feb 2025 - Aug 2026

- Trained hands-on in Python, OOP, SQL, Django, Django REST Framework, REST APIs, React.js, Git, GitHub and Generative AI.
- Built backend applications and REST APIs using Python, Django and Django REST Framework.
- Designed and tested CRUD endpoints and authentication flows for full-stack applications.
- Worked with MySQL and SQLite, including schema design and query debugging; used Git, GitHub and Postman for version control and API testing.

EDUCATION

B.Tech, Computer Science Engineering (AI & Machine Learning) | 2021 - 2025
DPG Institute of Technology & Management, Maharshi Dayanand University | CGPA: 7.3

TRAINING & CERTIFICATIONS

- Python Full Stack Internship, QSpiders (Feb 2025 - Aug 2026)
- Complete Generative AI Course with LangChain and Hugging Face, Udemy (70 hours, Oct 2026)
- Cybersecurity Training, Honeywell & ICT Academy
- Power BI Training, Web Jyoti
